E-Learning Platform

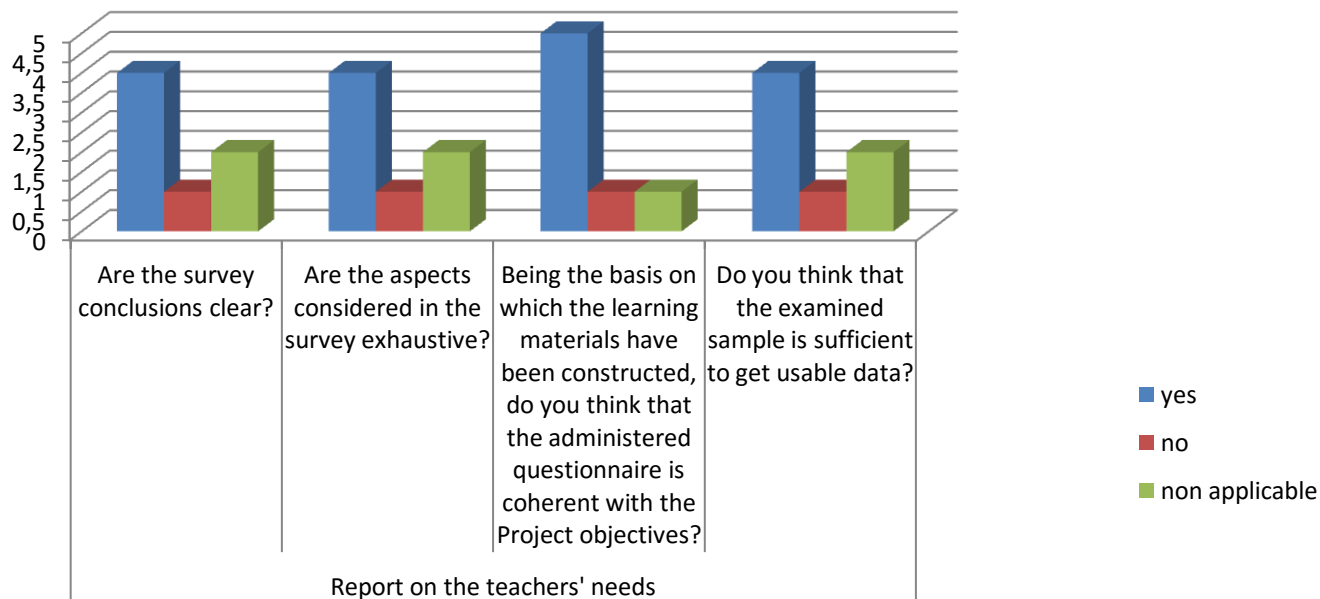

Topics report

Competences report

Report on the teachers' needs

The overall evaluation by the RED TEAM is positive. The website structure and the e-learning platform are user friendly and the contents are clear and relevant to the objectives of the project. The methodologies and the exercises, both in Maths and in Science, are functional and clear. The questionnaire used to assess the teachers' needs is considered consistent with the project objective and the conclusions are clear and exhaustive. The only point to be improved is the simplicity to detect information in the website.

Half of the RED Team components are from the industrial world, therefore the evaluation has taken into consideration the impact that the considered competences can have in the working daylife of a future worker.
